

Supreme's Stadium Sound Selector

What We Built - Feature List

A custom desktop app that watches College Football 27 live while you play - no mods, no game files touched - and fires your own hype songs, stings, and theme music automatically based on what's happening in the game.

Detection (the "how does it even know")

- Reads the down & distance HUD live via OCR - zero memory hacking, zero Frosty modding
- Auto-fires a song the instant the down changes (1st/2nd/3rd/4th)
- Penalty flag detection scaffolded and ready to calibrate
- Smart flicker-proofing so a misread frame can't double-fire the same song

Manual Triggers

- 34 hand-mappable hotkeys pulled straight from the game's own official event list - touchdowns, turnovers, kickoffs, drive starters, iced games, and more
- Numpad + Ctrl/Shift/Alt banks so you've got dozens of one-key stings on deck mid-game

Audio Engine

- 1-second pre-roll so triggers don't feel like they're stepping on the moment
- Fade-in on start, fade-out starting at 9 seconds so nothing runs over live gameplay
- Volume slider - real-time master control
- Built-in reverb - three presets (Stadium / Dome / Night Game), hand-written DSP, no plugins
- Stop Playback button - kill whatever's sounding, instantly

Built-In Song Trimmer

- Trim any song right inside the app - set start/end, preview the exact clip, save it as a new file
- No external editor needed to turn a 3-minute song into a 10-second hype clip

Team Profiles

- Save your whole setup - every song, every mapping - as a named profile per team
- Load/Save/Delete right from the UI, swap between teams in seconds

The App Itself

- Dark, custom-themed UI (glass-style buttons, no default Windows gray)
- Live event log - see every OCR read, every fire, every suppressed false-trigger in real time
- Search bar to filter 39 rows down to what you're looking for
- "Assigned" indicator - see your setup progress at a glance
- Compact Mode - collapse to a mini status bar during actual gameplay
- System tray support - minimize it and forget it's running
- Fully tunable timing (pre-roll, fade, cooldown) - no rebuild required
- Crash logging - if something breaks, there's a receipt

Suggested Video Beats

1. Cold open: the "before" - silence/default game audio
2. Show the trigger grid, assign a song live
3. Play a snap, land on 2nd down -> song fires automatically (the money shot)

Supreme's Stadium Sound Selector

What We Built - Feature List

A custom desktop app that watches College Football 27 live while you play - no mods, no game files touched - and fires your own hype songs, stings, and theme music automatically based on what's happening in the game.

4. Toggle reverb presets on the same clip so viewers hear the difference
5. Trim a song live, show the preview
6. Save a profile, switch teams, show it reload instantly
7. Close on Compact Mode tucked in the corner during a real drive
